

ONEMOP Microfiber mop

ONEMOP microfiber mops are made from recycled fiber. This is a light weight, cost-effective, powerful and easy-to-use microfiber mop. The mop is washable, but at the same time perfectly suited as a disposable product thanks to the cost-effective manufacturing method.

ONEMOP works just like a 10-15 times heavier microfiber mop and has a bacteria-reducing effect of up to 99.9%. Water and chemical consumption is greatly reduced and cleaning surfaces are drier after cleaning, compared to regular mops.

ONEMOP gives a significantly better cleaning result than cleaning with ordinary microfiber mops. The mop attaches directly to the mop stand.

Withstands at least 500 washes at 90°C.

The carton has a perforated opening.
