· Protection of hands:

Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Protective gloves

Wear protective gloves according to EN 374.

Skin protection creams do not provide as effective protection as protective gloves. Therefore, suitable protective gloves should be preferred as much as possible.

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

· Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Use protective gloves. The glove material must be sufficiently impermeable and resistant to the substance used. Check for leaks before use. Pre-clean gloves before removing, then keep well ventilated. Pay attention to skin care.

Skin protection creams do not provide adequate protection against this substance.

Completely unsuitable are cloth or leather gloves.

Suitable gloves are made from the following materials (breakthrough time > = 8 hours):

Butyl rubber - butyl (0.5 mm)

Fluororubber - FKM (0.4 mm)

Not suitable due to degradation, strong swelling or low penetration time are the following glove materials:

Natural rubber / natural latex - NR

Polychloroprene - CR

Nitrile rubber / nitrile latex - NBR

Polyvinyl chloride - PVC

· Penetration time of glove material

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

· Eye protection:

Not required in normal use

Tightly sealed goggles

· Body protection: Protective work clothing
